PROFILE

Production Engineer on the Fleet Operations team at Crusoe, working on the Managed Kubernetes and Managed VM platforms. Run a two-node k3s cluster on a single Proxmox host at home, from the hardware and virtualisation up through GitOps-managed Kubernetes, and troubleshoot faults across that stack from kernel drivers to workloads.

TECHNICAL SKILLS

Linux & Virtualisation Arch Linux, Proxmox VE, LXC, ZFS, systemd, shell scripting
Networking & Security TCP/IP, DNS (split-horizon), WireGuard, Cloudflare Tunnel + Access, SSL/TLS, Authelia (OIDC, ForwardAuth)
Kubernetes & GitOps k3s, Helm, ArgoCD (app-of-apps), MetalLB, Traefik, Longhorn, Sealed Secrets, cert-manager
CI/CD & Observability GitHub Actions, GHCR, VictoriaMetrics, Grafana, Alertmanager, restic, Backblaze B2
Languages & Tools Python, Bash, Java, C, SQL; Git, Gitea, Technitium DNS

EXPERIENCE

Production Engineer · Crusoe

Aug 2026 – Present

- Fleet Operations for Crusoe's Managed Kubernetes and Managed VM platforms, run for external customers.
- Kubernetes platform tooling, monitoring and alerting, log analysis, incident response and post-mortems, automated remediation, and SLI/SLO maintenance.

Summer Student — Human Resources · Roscommon County Council

Jun – Sep 2025

- Data entry, records management, and financial processing across employee files and payroll administration; shipped PDF-Sorter (Python, regex + OCR fallback) to automate a document-sorting bottleneck. github.com/hpdowd/PDF-Sorter

PROJECTS

Homelab — k3s / GitOps Platform · Personal

2024 – Present

- Two-node k3s cluster on a single Proxmox host, GitOps via ArgoCD app-of-apps pattern, git repo as single source of truth.
- Platform assembled from components: MetalLB, Traefik ingress, Longhorn persistent block storage (replica=1, deliberate single-worker tradeoff over host-level ZFS RAID-1 mirror), Sealed Secrets for encrypted credentials in git.
- Workload hardening: dropped capabilities, seccomp RuntimeDefault and no privilege escalation across the app workloads; default-deny ingress NetworkPolicies on the namespaces that tolerate them.
- CI/CD end-to-end: GitHub Actions builds, pushes to GHCR, updates SHA-pinned manifest, ArgoCD reconciles; in-cluster runner lints manifests.
- Public ingress via Cloudflare Tunnel (no inbound ports open), split-horizon DNS via Technitium, wildcard TLS via cert-manager and Let's Encrypt DNS-01; Cloudflare Access on sensitive hosts.
- Single sign-on with Authelia: Traefik ForwardAuth on the gated hosts, OIDC provider for six applications, LAN paths ungated as break-glass.
- Observability with VictoriaMetrics, Grafana, Alertmanager and `absent()` guards so a dead scrape self-alerts; encrypted offsite restic backups to Backblaze B2, quarterly verified restores.
- Diagnosed intermittent e1000e (Intel I219-LM) NIC transmit hangs across ethtool offload settings, modprobe driver parameters, and GRUB `pcie_aspm=off`; architecture decisions recorded as ADRs, incidents as post-mortems. github.com/hpdowd/homelab

Final Year Project — Paraphrase Detection · Maynooth University

2025 – 2026

- Built a dual-branch classifier fusing BERT cosine similarity, Zhang–Shasha tree edit distance, Jaccard overlap, and length ratio; evaluated on the MSRP corpus in Python with HuggingFace Transformers, PyTorch, and scikit-learn.
- Performed error analysis comparing structural vs. semantic methods, with confusion matrices, score distributions, and parse-tree examples of failure modes. github.com/hpdowd/paraphrase_detector

EDUCATION & CERTIFICATIONS

BSc Computational Thinking · Maynooth University

Sep 2022 – May 2026

Pure Mathematics & Computer Science · Year abroad at the University of Ottawa, Sep 2024 – May 2025

Fortinet NSE 1–3 (2026) · Full driving licence · CTYI alumnus
